

HOSTING INFRASTRUCTURE · SERVICE PROFILE

Web Hosting

Your site stays fast, secure and online. A real engineer answers when you need help — on the infrastructure that runs our own 30+ production sites.

10,000+ systems delivered for clients in 150+ countries — and we run our own 17-brand company on systems like this. You own everything we build.

PROVEN ON US

19+ years hosting client sites — and 30+ of our own run 24/7 on the same platform. Which means your site runs where ours do.

01 · THE COST YOU PAY TODAY, AND THE FIX

WHAT IT COSTS YOU TODAY

Cheap hosting bills look small until you count the real cost. Your site slows exactly when traffic peaks. Support reads from a script while orders and enquiries slip away. Every outage, every unanswered ticket, every security scare costs you sales, hours and trust — month after month.

WHAT YOU GET INSTEAD

Your site runs on real allocated resources — enterprise Hetzner hardware with SSL, daily backups and malware scanning included. This is the same infrastructure behind our own 30+ production sites. Which means you get the uptime and engineer support we rely on ourselves.

What you get

01

Speed your visitors feel

Your site runs on enterprise Hetzner hardware in European data centres, with NVMe storage and redundant power. Which means fast pages and steady speed at peak.

02

A real engineer answers

Your support requests reach people who manage production servers every day. Which means a slow site or mail issue gets a real diagnosis, not a scripted reply.

03

Room to grow, no migration

Shared, business, reseller and VPS plans run on one platform. Which means your site moves up a tier as you grow — no migration, no new vendor.

04

Security included, not sold

SSL, daily backups and malware scanning come with every plan at no extra cost. Which means less risk to your site — and no surprise add-on bills.

05

Full control for your team

You get SSH access, Git deployment and staging environments. Which means your developers test safely and ship changes without waiting on us.

06

Your own hosting brand

Through Orvoxa, you can run a branded hosting business on our infrastructure. Which means you sell hosting and keep the margin, while we carry the servers and support.

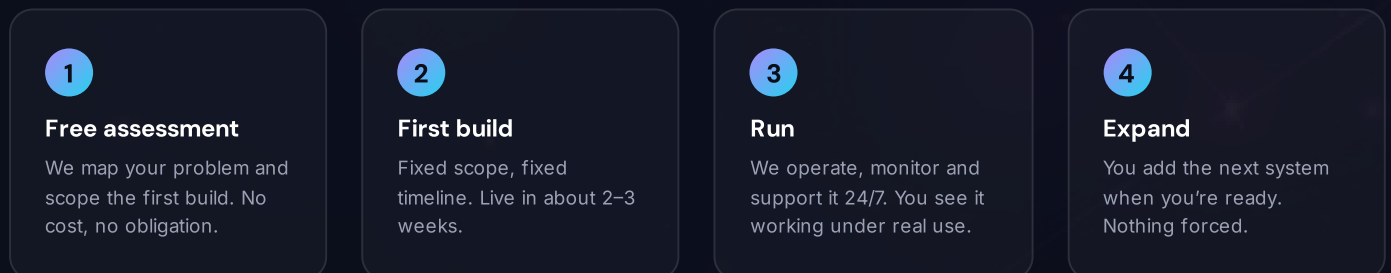

YOU OWN IT | Everything we build — code, data and IP — is yours. Which means no lock-in, ever.

02 · WHAT'S IN SCOPE

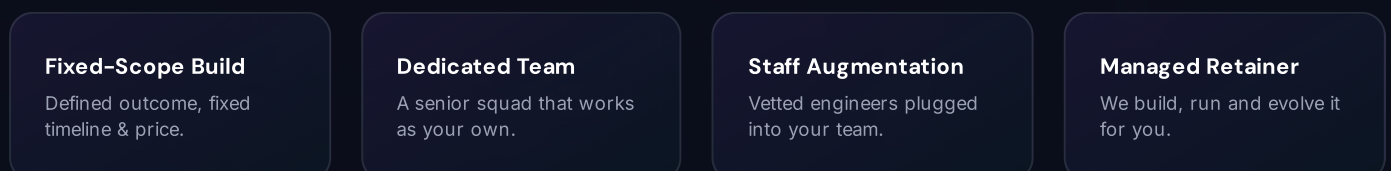

What's in scope

- ✓ cPanel control panel on every plan
- ✓ NVMe SSD storage as standard
- ✓ Malware scanning and account monitoring
- ✓ Staging environments for safe releases
- ✓ Free SSL certificates, auto-installed
- ✓ Daily backups with tested restores
- ✓ SSH access and Git-based deployment
- ✓ Ticket, chat and phone support (business hours)

| Common questions

Which plan do I actually need?

Most sites run well on shared or business plans. Reseller lets you sell hosting under your brand. VPS gives you root access and dedicated resources. All four run on one platform, so you can change tier later without changing provider.

Who answers when my site goes down?

An engineer who manages production servers for a living — the same people behind our own 30+ production sites. You describe the problem once and get a real diagnosis, not a scripted checklist.

Can I run my own hosting brand on your servers?

Yes. Orvoxa is our white-label platform for exactly that. You run the brand and keep the customer relationship. We handle the storefront, migrations, servers and support load behind it.

How do we start?

Start with a free assessment of your current setup. Then a fixed scope — your sites live on our platform in about 2-3 weeks, no surprise bill. We run it after launch; you expand when ready. The assessment costs nothing and carries no obligation.

Book your free assessment

Free assessment → fixed-scope first build, live in ~2-3 weeks → run & expand.

No cost, no obligation. Full profile: rapinova.com/resources
